## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments filed 05/05/2009 have been fully considered but they are not persuasive.

In response to the Applicant's remarks on pages 9-14, the Examiner disagreed.

Stein clearly discloses the information being indicative of signals of a set of base stations that a repeater can detect in the wireless communication system based on a repeater may also be used to extend coverage into rural areas (e.g., along a freeway) that are outside the coverage area of the base stations. A repeater receives, conditions, and retransmits signals on both the forward link such as a the path from the base station to the mobile device and reverse link (see par [4]); and updated to reflect the delay of the repeater that used for position determination in indoor where signals from other base station and the coverage areas of the repeater (see par 146]) a neighbor list based on the received information based on the same feature of the pilot references from neighboring base stations that may provided with the neighbor list associated which the base station with which it communicates. Each base station may be associated with a respective neighbor list, which includes nearby base stations that are candidates for handoff (see par [49, 108]).
